## **C.W. Silver Industrial Services Inc. Earns Certification from Koyo Corporation of USA**

**Salt Lake City, UT (July, 2010)** – C.W. Silver, a leader in electrical equipment repair and field service, has been named a Factory Certified Repair Center for electrical motor bearing repairs by Koyo of Corporation of USA. According to the Institute of Electrical and Electronic Engineers (IEEE) over half of all electrical motor failures are bearing related.

“C.W. Silver has well established itself in Salt Lake City as one of the leading electrical equipment repair companies in the western region and this just further demonstrates our commitment to provide our customers the very best in electric motor repair.” said Jim White, President of C.W. Silver.

Koyo’s Certified Electric Motor Repair Center program is geared towards improving a shop’s overall bearing knowledge and eliminating typical failure modes associated with bearings and electric motor repairs. The program encompasses a 4-step process starting with a comprehensive shop audit by a Koyo representative, leading to a custom designed training class, followed by a certification exam for shop personnel, and lastly a 2-year check up to make sure certification requirements are still intact.

“We believe the program enables electric motor repair shops such as CW Silver to provide their customers with added value in the form of reliable, consistent, quality repair work.” said William Bud Frabell, Sr. Application Engineer for Koyo Corporation of USA.
